**Subject: Summary Letter: Trenton Central High School Perimeter Fence Line Asbestos Air Sample Analytical Results for the Period November 16 through December 3.**

Dear Mr. DaSilva:

CB&I Government Solutions, Inc., (CB&I) is submitting this letter to transmit the analytical results of perimeter fence line asbestos air samples collected during the interior asbestos abatement at Trenton Central High School. The summary of results presented in this letter is for Phase Contrast Microscopy (PCM) fence line air samples collected during the period from November 16, 2015 through December 3, 2015. While asbestos abatement and demolition activities are occurring, four fence line samples are collected daily (north, south, east and west fence line). Results show all air samples to be within US Occupational and Safety Administration (OSHA) acceptable levels for permissible exposure.

Please note that no fence line asbestos air samples were collected during the period from October 22, 2015 through November 15, 2015. There were no asbestos abatement activities occurring at Trenton Central High School during this period.

Should you have any questions please do not hesitate in contacting me.

Sincerely,

Michael Vollo, MS  
Consultant Client Manager
